

## EXPERIENCE

Security Roots  
Jul 2019 - Current

Application developer building and delivering software to teams in air gapped environments. Designing and implementing pipeline upgrades to enhance delivery to clients. Facilitated new internal team workflows for quicker project release cycles.

Ambit Contacts  
Mar 2018 - May 2019

Lead API architect and developer. Engaging mobile teams in feature spec development and planning to ensure flexibility, compatibility, and completeness. Core focus on API best practices to provide consistent, fast, and well documented API's for overall developer happiness.

Retail Zipline  
Mar 2017 - Mar 2018

Responsible for delivering new customer facing features with minimally defined requirements. Increase product value, and user engagement. Guiding Information Security best practices. Defining internal SLAs. Triaging and resolving security issues in a timely manner. Answering vendor security assessments. Coordinating bounty programs. Performing internal, and application security audits.

Unbounce  
Oct 2013 - May 2016

Technical lead for service projects and customer facing features. Architected, planned, and implemented SOA projects. Maintained and enhanced the customer portal rails application serving four million requests daily. Investigated and fixed CS related issues throughout distributed systems. Helped plan and launch a new product under tight deadlines, and requirements.

Attendease  
Feb 2012 - Oct 2013

Maintained and expanded on existing client projects with rails and javascript frameworks. Planned and developed intricate features with CMS capabilities. Worked with the team to overcome UX, and code challenges to build high quality software. Delivered custom mobile applications for customer events.
